Dear Tim and Adrian

I am writing to update Anti Bio on the progress and finding we as one of Queensland's largest State High School have found since installing the Anti Bio System on our 25 metre pool three months ago.

We have found:

- that the Anti Bio System has reduced chemical costs by 44.5% compared to last year's expenditure.
- reduced the need to backwash, therefore reducing water consumption and wastage.
- a more consistent Ph reading
- that the improved Ph stability and water clarity has reduced complaints from students and facility hirers regarding their perceived concerns in relation to water clarity/quality/hygiene.
- that the Anti Bio system has reduced downtime for repairs to the automated chlorine pump.
- a reduced chlorine odour in the indoor pool area.
- improved confidence from the Facilities Officers' in the overall maintenance and quality of the pool as well as a large reduction in the amount of time they spends maintaining the pool.
- that to date no maintenance has been required of the Anti Bio System.

As a whole we are extremely happy and confident in the Anti Bio system, and will endeavour to update you in another 6 and 12 months time.

Regards

ELAINE FICKLING
